

**Specification Amendments:**

Please delete the original Abstract of the Disclosure section, and replace it with the new Abstract of the Disclosure shown in clean form on the attached sheet.

Please replace paragraph [0021] of the specification with the following amended paragraph:

--As is known, there ~~exist~~exists a number of varieties of the poker games different by the rotation, betting procedure or betting limits. Such varieties of the poker game are known as Seven Card Stud, Omaha Hi Lo, Texas Hold'em, etc. The rules and strategy of these games are not beyond the scope of the present invention. In order to illustrate the use of the game table 10 of the present invention, let us assume that 4 players participate in a \$2/\$4 [[s.]] Seven Card Stud game. First, all the players have occupied their positions at appropriate consoles, e.g., 121, 122, 124, 125. The tournament begins when all the seats are occupied, and funds are deposited using the credit card reader 43. According to the rule of poker, the deposits may be displayed to other players. This information can be shown either on the displays 32 or on the common display 16. After this moment, none of the players can change the seat. In order to determine who deals the first round, each player is dealt one card randomly through the action of the random combination generator unit 19. This is done by pushing on the appropriate action button, e.g., button 41-1. Let us assume that the play who gets the lowest card. This fact is indicated by this player pushing the button 34 indicating the player assuming a role of a dealer in the current round. The cards are returned to the stack by pushing an appropriate action button, e.g., button 44-2. The player who assumes a role of the dealer deals each player two cards face down and one face up, which can be done via the CPU17 by pushing one of the action buttons.--
